

**Titan Trailers
Custom Built For**

Grain & Agriculture

THINWALL 53' Tipper
Since 1966

B-Train

48' Moving Floor

- Moving Floor Trailers
- B-Trains
- Tipper Trailers
- Hopper Trailers
- Possum Belly Trailers

More payload • Lower fuel cost • Longer life

- Original THINWALL™ body construction
- Full range of models to 53 ft.
- Custom axle configurations: tandem, lift-axle, multi-axle
- Customize to your application: drum & hub assembly, suspensions, tires, rims, landing gear, plus other specifications

Strength Through Innovation

www.titantrailers.com

Custom built for the business you're in

From our famous THINWALL™ moving floor trailers, tippers and hopper trailers to our innovative semi-dumps, possum bellies and “extreme-duty” models, Titan trailers are renowned for long lasting strength in the most demanding jobs. But our real strength is custom-designing and building the right trailer to help your business drive for the bottom line.

Only the original THINWALL gives you the patented end-to-end strength of double-welded double-wall extruded aluminum.

Titan THINWALL is the only aluminum smoothside that's 100% machine welded from end to end, inside and out. Full-length horizontal welds allow better flexing over rough terrain. The hollow-core ribs reduce inside punctures and virtually eliminate exterior sidewall damage.

Walk Thru™ B-Train

More uptime

- protective LED light housings • stainless steel hydraulic lines
- “service-friendly” undercarriage • stainless steel and anti-rust fasteners

More years

- 6061-T6 extrusion-grade aluminum body • crossmembers interlocked and welded into side panels • one-piece front gusset • bimetal joint buffers
- stainless steel liner between the suspension and main frame • double-wall side panels

More pay per payload

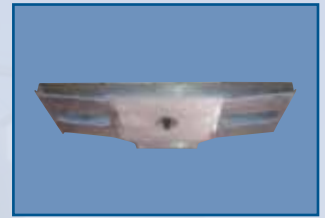

- 10% more cubic capacity • patented aluminum coupler reduces weight by 300 lbs. • smoothside panels and light weight save 15% of fuel costs

48 ft. Moving Floor

Spec'd to haul up to 90,000 lbs. of locally grown crops in the Great Lakes basin, this 48 ft. THINWALL moving floor trailer is equipped with a liftable rear axle to improve its off-road maneuverability.

Heavy-duty top rails are sloped for shedding and provide the extra strength to stand up to side-loading impacts and stresses.

Patented aluminum coupler reduces weight by 300 lbs. for more payload and fuel efficiency without sacrificing strength.

The Titan Kicker Plate™ allows faster, safer offloading of non-flowing or compressed material by “kicking” bulk materials away from the front wall of the trailer.

The Flip-up Shedder means convenience for operators and reduced downtime with simpler clean-out and maintenance.

Customer driven:

Front access door allows easier servicing and viewing access of trailer interior while unloading.

V-Floor® unloader systems resist “extreme duty” loads with overlapping steel slats or new lighter weight V-18 aluminum slats.

“Flow-through” tailgate reduces drag on Titan tippers to cut down on fuel costs.

Side-rolling tarp is electrically operated for fast closing.

Titan Kicker Plate™ keeps compacted material moving.

Service-friendly undercarriage simplifies access and maximizes workspace for routine maintenance.

Titan uses KEITH® **WALKING FLOOR®** self-unloader systems.
