

**Titan Trailers  
Custom Built For**

# Forestry & Logging

48' Tandem Tipper

53' 4 Axle Superquad Possum Belly

53' Multi-Axle V-Floor

- Moving Floor Trailers
- “Extreme-duty” Trailers
- Tipper Trailers
- Possum Belly Trailers
- Flat Deck Trailers
- B-Trains

**More payload • Lower fuel cost • Longer life**

- Original THINWALL™ body construction
- Full range of models to 53 ft.
- Custom axle configurations: tandem, lift-axle, multi-axle
- Customize to your application: drum & hub assembly, suspensions, tires, rims, landing gear, plus other specifications

*Strength Through Innovation*

# Custom built for the business you're in

From our famous THINWALL™ moving floor trailers and tipper to our high-capacity possum belly and “extreme-duty” models and flatdecks, Titan trailers are renowned for long lasting strength in the most demanding jobs. But our real strength is custom-designing and building the right trailer to help your business drive for the bottom line.

Only the original THINWALL gives you the patented end-to-end strength of double-welded double-wall extruded aluminum.

Titan THINWALL is the only aluminum smoothside that's 100% machine welded from end to end, inside and out. Full-length horizontal welds allow better flexing over rough terrain. The hollow-core ribs reduce inside punctures and virtually eliminate exterior sidewall damage.

48' Moving Floor

## More uptime

- protective LED light housings • stainless steel hydraulic lines
- “service-friendly” undercarriage • stainless steel and anti-rust fasteners

## More years

- 6061-T6 extrusion-grade aluminum body • crossmembers interlocked and welded into side panels • one-piece front gusset • bimetal joint buffers
- stainless steel liner between the suspension and main frame • double-wall side panels

## More pay per payload

- 10% more cubic capacity • patented aluminum coupler reduces weight by 300 lbs. • smoothside panels and light weight save 15% of fuel costs

## “Walk-Thru” B-Train

For the industry's first “Walk-Thru” THINWALL B-Train, Titan developed a unique coupler to draw the two trailers together as a single 62'8" unit so its 5000 cu. ft. loads can be walked off or unloaded at the tipper in one step.

V-Floor® unloader systems resist “extreme duty” loads with overlapping steel slats or new lighter weight V-18 aluminum slats.

Greaseless graphite-impregnated hinge blocks ensure maintenance-free service for top-hinged gates on Titan tipper trailers.

The Titan Kicker Plate™ allows faster, safer offloading of non-flowing or compressed material by “kicking” bulk materials away from the front wall of the trailer.

Heavy-duty top rails are sloped for shedding and provide the extra strength to stand up to side-loading impacts and stresses.

## Customer driven:

**Front access door** allows easier servicing and viewing access of trailer interior while unloading.

**“Flow-through” tailgate** reduces drag on Titan tipper to cut down on fuel costs.

**Insulating sidewalls** with plywood liners help to keep chips and sawdust from freezing up in THINWALL trailers.

**Lift-up shedder** for simple clean-out.

**Axle configurations** matched to local load regulations; steering axles and multi-axle trailers available.

**Service-friendly undercarriage** simplifies access and maximizes workspace for routine maintenance.

Titan uses KEITH® **WALKING FLOOR®** self-unloader systems.
