

Pallet Forks

The upper support of the backframe is made in one piece for optimum strength. The beam has recesses for width adjustment and provides secure positioning of the forks. The load is distributed over a large area thanks to the wide load-bearing surfaces of the forks. This also ensures a stable fork that never tilts or wobbles.

PALLET FORKS	1.000	1.600	2.500
WIDTH, CM	140	140	140
MAX. LOAD, KG	1000	1600	2500
